

L^AT_EX(Lab Report Tutorial) A descriptive title that says exactly what you did and what you found

Abstract: Short version of concluding paragraph, include major discoveries, keep it short and state method.

Introduction: This section is background. It explores the ideas behind your experiment. Start with a topic sentence that states the purpose of the lab. Define any terms in this section The format is up to your teacher and citations must footnote citations. In L^AT_EX this is very easy. It just takes a bit of learning. In this example we will be using biblatex with biber. First you must find a source for citation. In our case we will use Mr.Madara's example lab report. He cites a source that says "Tacos require meat and cheese at all times". To do this we will make a .bibfile. Now a source was made in my.bib called taco. To cite this source as a footnote use supercite. This example can be found on Mr.Madara's website:¹ There is a skill needed to make tacos. "Tacos require meat and cheese at all times"
